Congruent Triangles. A polygon made of three line segments forming three angles is known as Triangle. Two triangles are said to be congruent if their sides have the same length and angles have same measure. Thus two triangles can be superimposed side to side and angle to angle. In the above figure,  $\Delta ABC$  and  $\Delta PQR$  are congruent triangles ...

### Congruence of triangles? | EduRev Class 9 Question

The right triangles share hypotenuse AR, and reflexive property justifies that  $AR \cong AR$ . Since  $AB \cong BC$  and  $BC \cong AC$ , the transitive property justifies  $AB \cong AC$ . Now, the hypotenuse and leg of right  $\Delta ABR$  is congruent to the hypotenuse and the leg of right  $\Delta ACR$ , so  $\Delta ABR \cong \Delta ACR$  by the HL congruence postulate.

Unit two is about proving the congruence of angles, sides, and triangles and using these congruent relationships to prove properties of parallel lines, triangles, and other polygons. Throughout the unit, students make conjectures from a set of examples and nonexamples, and justify or refine these claims by reasoning inductively using the tools ...

33.1 Congruence Two shapes are said to be congruentif they are the same shape and size: that is, the corresponding sides of both shapes are the same length and corresponding angles are the same. The two triangles shown here are congruent. Shapes which are of different sizes but which have the same shape are said to be similar.

1) Students logged onto a Nearpod session and we went over labeling and marking congruent triangles. I had students choose different colors to represent each separate marking. Below are some student examples pulled from my Nearpod report. This helped out my student SO MUCH! I did not realize how many misconceptions there were before this activity.

Students build on their conceptual understanding of rigid transformations established in middle school as they formally define each and then, use them to prove theorems about lines, angles, and triangle congruency. Rigid transformations are also used to establish relationships between two-dimensional and three-dimensional figures.
