Griffiths Introduction To Quantum Mechanics

Griffiths was my first introduction to quantum mechanics ever. Now that I've seen a lot of quantum mechanics, I have to say my opinion of Griffiths as a text to learn from has gone down significantly. I will explain more. The good: Griffiths is really special in my opinion. I really like how accessible this book is.

Many people (actually just physicists) are rude to those who have learned the wonders of Quantum Mechanics from Griffiths. They say that the treatment lacks some of the mathematical rigor that you see in Shankar or Townsend (the two main competitors in the Intro to Quantum market).

Here are my solutions to various problems in David J. Griffiths's textbook Introduction to Quantum Mechanics, Second Edition. Obviously I can't offer any guarantee that all the solutions are actually correct, but I've given them my best shot. There is an official site listing errata in the textbook. If you're confused by something in the text itself, it's worth having a look here to see if there is a typo on that page.

Griffiths' QM text is usually the standard text in undergraduate QM courses. But DO NOT BUY this edition! Buy the US edition, with the picture of a cat on top. The quality of this edition is appalling! There is, in fact, a comment by the author himself expressing anger over Pearson butchering the contents of the book.

These are my own solutions to the problems in Introduction to Quantum Mechanics, 2nd ed. I have made every effort to insure that they are clear and correct, but errors are bound to occur, and for this I apologize in advance. I would like to thank the many people who pointed out mistakes in the solution manual for the first edition,

Introduction to Quantum Mechanics by David J. Griffiths

Quantum mechanics shows that light, along with all other forms of electromagnetic radiation, comes in discrete units, called photons, and predicts its spectral energies (corresponding to pure colors), and the intensities of its light beams. A single photon is a quantum, or smallest observable particle, of the electromagnetic field.
