Make a table to summarize the information including: body ...

Jellyfish Dissection Lab - STEM MARIN Portfolio: Katie

Jellyfish have an incomplete digestive system whereby they have no intestines, liver or pancreas which are important in the digestion of food in most animals. The absence of these organs means that the same orifice is used for both food intake and waste depositing. Jellyfish dispose of their waste matter very quickly.

Jellyfish Anatomy - Diagram Of A Jellyfishes Physiology

Jellyfish Lab. Structure and Function: Sponges belong to the phylum cnidaria. They have a simple organ system and radial symmetry. They have a simple nervous system called a nerve net. Sponges reproduce asexually by budding. Ecology: The main role sponges play in an ecosystem is food. Though they sting fish and eat them themselves, sponges have ...

Jellyfish Dissection

Here we perform molecular dissection of a jellyfish venom-induced cell death pathway by screening for host components required for venom exposure-induced cell death using genome-scale lenti-CRISPR...

Molecular dissection of box jellyfish venom cytotoxicity ...

Here we perform molecular dissection of a jellyfish venom-induced cell death pathway by screening for host components required for venom exposure-induced cell death using genome-scale lenti-CRISPR mutagenesis. We identify the peripheral membrane protein ATP2B1, a calcium transporting ATPase, as one host factor required for venom cytotoxicity.

Molecular dissection of box jellyfish venom cytotoxicity ...

Here is my original site about the Irrawaddy dolphin that has all the information shared during the dissection:

Dissection Guide - Google Sites
