Rocks are analogous to the big, important things in our life that give it meaning: family, partner, health, goals and dreams. If you take actual physical rocks and put them in a glass jar, you'll find that there's space left over for smaller objects like pebbles, sand and water.

### Why You Need Rocks In Your Life (#54) - Robert Glazer

Rocks are so common that most of us take them for granted—cursing when we hit them with the garden hoe or taking advantage of them to drive in tent pegs on summer camping trips.

### Rocks Information and Facts | National Geographic

The Rock Cycle Rocks are constantly changing in what is called the rock cycle. It takes millions of years for rocks to change. Here is an example of the rock cycle describing how a rock can change from igneous to sedimentary to metamorphic over time.

### Home | Get Busy Living

"My earliest memories all involve being drawn deep into nature, where I welcome, rather than fear, getting lost. I welcome the mysteries that lurk at the bottom of the sea and live inside the dark forest of night." — Joe Perry, Rocks: My Life in and out of Aerosmith

### Rocks Quotes by Joe Perry

Big rocks are the things that truly matter to you in your life. Without getting your big rocks in first, they will never fall into place. You can be busy with random day-to-day activities (which are the gravel, sand, and

Rocks and minerals play a valuable role in natural systems such as providing habitat like the cliffs at Grand Canyon National Park where endangered condors nest, or provide soil nutrients in Redwood where the tallest trees in the world grow. Rocks and minerals are important for learning about earth materials, structure, and systems.

The Big Rocks of Life! One day a wise teacher was speaking to a group of his students. He pulled out a one-gallon, wide-mouthed mason jar and set it on a table in front of him. Then he produced about a dozen fist-sized rocks and carefully placed them, one at a time, into the jar.

### **The Big Rocks of Life!**

The rocks in space are sometimes called small bodies. Some of them are larger and are called minor planets or planetoids. They may also be known as NEOs -- Near Earth Objects. Whatever they may be called, they have much to tell us about our solar system. The three main types of space rocks are comets, asteroids and meteoroids. ...

### **NASA - Space Rocks**

Over long periods of time, many rocks change shape and type as they are transformed by wind, water, pressure, and heat. All rocks contain one or more minerals. Rocks and minerals are mined to help make things around us, from the large stone slabs used in buildings to the tiny pieces of metal in phones and jewelry.
